## Report for Preparation of Herbarium sheets 2021-22

### Report

#### Preparation of the Herbarium sheet and Authentication of plant

**Student Name-** Nayakwadi Muskan Munnawar

**Class-**SY. B pharm

**Sem-**4<sup>th</sup>

**Div. -**B

**Roll No-**61

**Academic Year-**2021-2022

**Plant Synonym -** Trigonella, Greek clover, flavourer

**Vernacular Name / Common name-** methi, saag methi, kasuri methi

**Local Name –** methi

**Scientific name –** Fenugreek

**Biological Source –** Fenugreek (*Trigonella foenum graecum*) is an annual plant belongs to the family Leguminosae. It is the famous spices in human food. The seeds and green leaves of fenugreek are used in food as well as in medicinal application that is the old practice of human history. The Fenugreek plant is native to Europe, Asia and Africa. It is also widely grown as a food crop in India, North Africa and Yemen. 03-Jul-2022

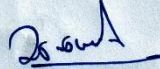

**Genus-** Trigonella

**Species- :** *T. foenum graecum*

**Family-** leguminosae

#### Microscopy of plant-

When observing fenugreek using microscopy, one might see:

  
PRINCIPAL  
Ashokrao Mane College of Pharmacy  
Peth-Vadgaon, Dist. Kolhapur.

Preparation of herbarium sheet and Authentication of plant

[BACK TO INDEX](#)

1. Flower structure:
2. Pollen Structure:
3. Stamen structure:
4. Ovary Structure:
5. Leaf structure:

Overall, microscopy of fenugreek can provide detailed information about the structure and function of its reproductive organs and other plant parts.

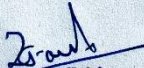

#### **Macroscopy of plant-**

When observing fenugreek using macroscopy, one might see:

1. Flower arrangement :Flower morphology consists of a large number of parameters, including the number and shape of petals, number of stamens, petal size and the number and arrangement of styles and ovaries. Some of these characters, for example, the size of floral organs, seem to be controlled by several genes, whereas single (five petals) versus double (>10 petals) was shown to be inherited by a single gene.
2. Petal color and shape: Fenugreek is an annual herb, 30 to 90 cm tall, and has light green leaves which are pinnately trifoliolate. The flowers are papilionaceous and white or yellow in colour.
3. Leaf shape and color: . leaf shape, tip and base features, and margins (edges). Leaf surface characteristics vary and some may be smooth (glabrous) or with hairs (hirsute or pubescent), wrinkles (rugose), pustules (verrucose) or other interruptions of the surface.
4. Pigment : Mature fenugreek leaves contains large amount of green coloured chloroplast, which are largely responsible for its dark green colour.

Overall plant structure, and overall plant size.

**Phytochemistry-** The aqueous extract and alcoholic extract were used for analyzing the main phytochemical , nutrient and active groups composition of fenugreek seeds powder (*Trigonella foenum graecum*).The preliminary tests of active groups in extracts were carried out. It appeared to contain (alkaloids , flavonoids , steroids , carbohydrates, terpenes , tannins , saponins , glycosides , free amino acid , crude protein and phenolic compounds ) . The extracts were different in their content of active groups quantitatively and qualitatively . The amount of moisture and crude fiber , total ash , total oil , concentration of crude protein , carbohydrate , nitrogen content and caloric value on a dry weight basis , were found to be (6.833±0.531) humidity ,solid material (93.166±0.531) , crude fiber (17.0±0.2) , the percentage of total ash were (3.566±0.478) ,

  
PRINCIPAL  
Ashokrao Mane College of Pharmacy  
Peth-Vadgaon, Dist. Kolhapur.

Preparation of herbarium sheet and Authentication of plant

the percentage of total oil ( $7.15 \pm 0.25$ ), concentration of crude protein ( $28.45 \pm 0.15$ ), while the concentration of carbohydrates ( $1340 \pm 0.029$  mg/100g), and the caloric value for fenugreek seeds powder is (5544.9) kcal/100g. The quantitative content of (alkaloids, flavonoids, steroids, tannins, free amino acid, saponins) were estimated. The results indicated that the percentage alkaloids ( $1.8 \pm 0.1\%$ ), percentage of flavonoids was ( $12.135 \pm 0.465\%$ ), while the concentration of steroids ( $214 \pm 0.024$  mg/100g), tannin concentration ( $63.69 \pm 1.67$  mg/100g), and amino acid concentration ( $70 \pm 0.064$  mg/100g), and percentage of saponine was ( $25.65 \pm 0.69\%$ ). The present study showed that fenugreek seeds is a very rich energy and antioxidant. So that is very important to be entered the system of human nutrition, are economic nutritional source can be used as human food supplement, which contains important amounts of carbohydrates, protein, fat and amino acids.

#### Medicinal uses-

1. *Diabetes.* Some research shows that consuming fenugreek seed, mixed with food during a meal, lowers blood sugar levels after the meal in people with type 2 diabetes. However, while taking 5-50 grams of fenugreek seed once or twice daily seems to work, lower doses of 2.5 grams don't seem to work. In people with type 1 diabetes, taking 50 grams of fenugreek seed powder twice daily seems to reduce the amount of sugar.
2. *Improving sexual performance.* Taking 600 mg of a specific fenugreek seed extract (Testofen, Gencor Pacific Ltd) each day seems to improve ability and interest in sex in older men that have started to lose interest and in healthy younger men
3. *Painful menstrual periods (dysmenorrhea).* Taking 1800-2700 mg of fenugreek seed powder three times daily for the first 3 days of a menstrual period followed by 900 mg three times daily for the remainder of two menstrual cycles reduces pain in women with painful periods. The need for painkillers was also reduces
4. lowering blood sugar levels, boosting testosterone, and increasing milk production in people who are breastfeeding. Fenugreek may also reduce cholesterol levels, lower inflammation, and help with appetite control, but more research is needed in these areas.

**Report for Preparation of Herbarium sheets 2019-20****HERBARIUM SHEET REPORT****“Preparation of Herbarium Sheet & Authentication of Plant”**

Student name: - Prathamesh Dhanaji Patil

Academic Year: - 2019-2020

Roll no: - 82

Division: - B

Class: -F.Y.B.Pharm

Sem: - I

Name of plant: - Marigold

**Calendula officinalis**

➤ **Plant synonym:** - Pot Marigold, Zendu

➤ **Vernacular name / common name:** - Marigold

➤ **Local name:** - Zendu

➤ **Scientific name:** - Calendula officinalis

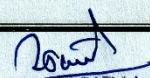

➤ **Biological sources:** - Calendula officinalis, the pot marigold, common marigold, ruddles, Mary's gold or Scotch marigold is a flowering plant in the daisy family Asteraceae. It is probably native to southern Europe, though its long history of cultivation makes its precise origin unknown, and it may possibly be of garden origin.

➤ **Genus:** - Tagetes erecta

➤ **Species:** - marigold (*Tagetes erecta*).

➤ **Family:** - Asteraceae

➤ **Microscopy of plant:** - Mexican marigold is an erect annual herb that grows up to a height of 180 cm. The inflorescence is a solitary terminal head, up to 12 cm in diameter, bright

  
PRINCIPAL

Ashokrao Mane College of Pharmacy  
Peth-Vadgaon, Dist. Kolhapur.

**BACK TO INDEX**

yellow in wild types, lemon-yellow to deep brown-red in cultivated types. There are numerous (mostly ornamental) cultivars of Mexican marigold, differing in flower colour, flower size and plant height

> **Chemical Constitution: -**

The major components were identified as cis-ocimene (18.46%), (E)-oscimene (8.65%), l-limonene (11.16%), (E)-tagetone (10.56%), b-caryophyllene (6.9%) and dl-limonene (4.16%). The essential oil was evaluated in vitro for antioxidant activity using specific assays. A significant antioxidant and radical scavenging activity was observed. The oil also exerted significant antifungal activity against the phytopathogenic fungi, *Rhizoctonia solani*, *Sclerotium rolfsii* and *Macrophomina phaseolina* and antibacterial activity against *Xanthomonas oryzae*, *Klebsiella pneumonia*, *Pseudomonas aeruginosa*.

> **Phytochemistry: -** phytochemical screening test on marigold leaf extract showed that marigold leaves contained alkaloids, anthocyanins, betacyanin, cardio glycosides, coumarins, flavonoids, glycosides, phenolics, quinones, saponins, steroids, terpenoids and tannins.

> **Medicinal uses: -**

Fevers, Jaundice, Stomach ulcers, Conjunctivitis (pink eye), Liver problems, Burns and wounds, to stop bleeding

> **Diagram: -**
